Project Design Phase-II

Solution architecture

| Date	27-10-2023
Team Leader	M. Akash
Project Name	Online Payments Fraud Detection Using Machine Learning

Solution architecture:

Solution architecture is a complex process - with many sub-processes - that bridges the gap between business problems and technology solutions. Its goals are to:

- Find the best tech solution to solve existing business problems.
- Describe the structure, characteristics, behavior, and other aspects of the software to project stakeholders.
- Define features, development phases, and solution requirements.
- Provide specifications according to which the solution is defined, managed, and delivered.

Example - Solution Architecture Diagram:

Architecture and dataflow of the online payments fraud detection using machine learning sample application
